

RELEASE NOTES 42.0.2.1

The *PostalOne!* system Release 42.0.2.1 is scheduled for implementation on January 14, 2016 to introduce software fixes to the system. This includes corrections to issues previously identified in a prior release.

These Release Notes provide the contents of the release and affected subsystems.

Contents of this document are subject to change.

Please note the following regarding the Mail.dat client download, there is no new client for Release 42.0.2.1

Mail.dat client	Status
42.0.0.0_PROD	Download required. All older versions will expire.

1. Corrections to Known Issues

The information for this section is derived from External Trouble Reports (ETRs) and Engineering Change Requests (ECRs).

1.1 Electronic Data Exchange

A Mail.dat performance improvement has alleviated an issue that previously caused tray-based origin mailings to sometimes fail import to Seamless Acceptance and Service Performance (SASP). The issue affected SASP and Full-Service processing, but did not affect postage. [8827 {B}](#)

1.2 Postage Statement Wizard

The Postage Statement Wizard has been updated to properly account for unsorted mail pieces (i.e., spoilage) in postage calculations. Previously, a defect incorrectly subtracted the spoilage postage twice, causing the total postage amount to be less than expected. [8848 {B}](#)
